Example Air
Operations Manual Part A
Chapter 7: Flight and Duty Time Limitations

Revision 4, effective 1 January 2026
Fictional document for testing the knowledge base.

7.1 Definitions

Flight Duty Period (FDP) means a period that starts when a crew member reports for duty and finishes when the aircraft finally comes to rest after the last sector.
Window of Circadian Low (WOCL) means the period between 02:00 and 05:59 in the time zone to which the crew member is acclimatised.
Home base is the location assigned by the operator where the crew member normally starts duty.

7.4 Minimum rest

The minimum rest period before a flight duty period starting at home base is 12 hours
or the length of the preceding duty period, whichever is greater.
The minimum rest period away from home base is 10 hours, including 8 hours of sleep opportunity.
Rest periods must be planned in the roster and published at least 14 days in advance.

7.5 Extended rest

Each crew member must receive a recurrent extended rest period of 36 hours including two local nights so that there are never more than 168 hours between the end of one extended rest and the start of the next.

Table 7.5: Extended rest

Period	Minimum	Nights
Recurrent	36 hours	2 local nights
After 4 time zones	48 hours	2 local nights
